Embedding Tearline Content Into Your Website

1.) Getting started

The first step towards integrating Tearline content into your site is to import the route and create an iFrame in your HTML.

In your HTML include the following:

```
<iframe src="https://www.tearline.mil/embedded/"></iframe>
```

The `iframe` object has several parameters that allow you to change the display of your Tearline widget:

Property	Description
`stylesheet`	A CSS stylesheet with custom formatting for Tearline content. See **Section 2** for a detailed explanation. Ex: https://www.tearline.mil/embedded/?stylesheet="https://www.tearline.mil/embed.css"
`tags`	An array containing a list of tags for selecting which categories to display. For example: tags=['arctic','climate'] If you set this parameter, **only content from the tagged categories will display**. Ex: https://www.tearline.mil/embedded/?tags=["arctic","climate"] Available categories: • arctic • china-econ • china-military • chinese-belt-road-initiative • climate • navigation • human-rights • machine-learning • north-korea-economy • russian-influence

Property	Description
• special-economic-zones	

2.) Customizing the Embedded Stories

By default, the Tearline site uses Bootstrap 3 styles, however, this can be customized with your own stylesheet. To use your own CSS styles, set the `stylesheet` property on a `PartnerEmbed` object to the absolute URL of a CSS file containing your own style definitions.

The following classes and IDs are applied to HTML elements:

CSS Class/ID	Tag	Description
`#public-container`	`div`	The main container holding all of the stories
`.public-story-item`	`div`	This class is applied to each div containing a story
`.post-cats`	`div`	The list of categories for a story
`.public-article-title`	`div`	`DIV` containing all elements of a the story title
`.public-title-header`	`strong`	Formats the title
`.public-last-updated`	`p`	Contains the "Last Updated" portion of the story
`.public-summary`	`p`	Brief summary description of the story
`.read-more`	`span`	Contains the "Read More" link, which opens the story in a new tab

3.) Example:

```html
<!DOCTYPE html>
<html>
    <head>
        <title>Tearline Articles</title>
    </head>
    <body>
        <iframe
            frameborder="1"
            id="tearline-embed"
            src="https://www.tearline.mil/embedded/?tags=['climate']"
            style="width:1200px; height:500px;">
        </iframe>
    </body>
</html>
```
